

Training in Vienna

---Keynes Huang

To learn more details about the BURNERS and NOZZLES of Dumag, Timon and I were sent to Vienna where the factory is located in. As one of the closed collaborators of Lonza Engineering, Dumag is famous for its ultrasonic nozzles and burners in the field of waste incinerator system. It is a good opportunity to closely observe such a very professional manufacturer.

A very nice gentleman, Mr. Haberfelner, treated us and arranged the whole course. He is the head of engineering of Dumag, and gave us many helps in the following days.

As the training course going on, we got to know many details: characters of the burners and nozzles, the control system, the commissioning, the usage reference...Mr. Haberfelner and other trainers answered many questions of us, not only professional but also unprofessional. At the end of training, we were entitled to commission and service to Dumag burner system.

Not only had we tried the burners, but also the food, the music, the architecture and the atmosphere. In the spare time, it is an interesting experience strolling around in Vienna.
